## VSA-Vault Sound Alarm Product Announcement

Because of component obsolescence, Potter Electric Signal Co. was recently forced to change the connectors that allow the APC (Accumulator Pulse Counter) to plug into the VSA. The new APC was designed so that it will work on both generations of the VSA board.

However, if you have an existing APC installed in a VSA and you have to replace the VSA motherboard, the old APC **WILL NOT WORK** on the new VSA motherboard. You will need to purchase a new APC that is compatible with the new VSA motherboard.

Potter apologizes for any inconvenience this may cause you. We researched all available options before making this change. If you have any questions please contact the Potter Technical Support Team at 800-325-3936.
