ABOUT THE KEYPAD

Thinline Series (7060, 7063, 7070, 7073, 7160, 7163, 7170, and 7173) and Aqualite Series (7060A, 7063A, 7070A, and 7073A) LCD keypads offer flexible features and functionality. Each keypad provides:

- Custom 16-character home or business name in the display
- Four 2-button panic keys
- AC Power/Armed LED
- 32-character display
- Backlit keyboard and DMP logo
- Internal speaker
- Red keyboard lighting in alarm conditions
- Simple harness connection to 4-wire keypad bus
- Optional backboxes for conduit or wall mount applications

Models 7070/A, 7073/A, 7170, and 7173
Provide four fully-programmable, Class B, Style A, supervised, power limited protection zones that can be programmed for a variety of burglary and access control applications.

Models 7063/A, 7073/A, 7163, and 7173
Provide a built-in proximity card reader designed to read proximity credentials.

Models 7073/A and 7173
Provide a door strike relay and allow Wiegand input from external card readers.

ENTER CHARACTERS

NUMBER PAD

1. Choose a character from the table. Use the Greek Characters table if Greek was selected as the keypad language setting.

2. Identify the Number the character correlates with and press that number on the number pad.

3. Identify the Select Key for the character and press that select key on the keypad. Press that select key again for the lowercase letter (Latin characters only).

4. When the desired character displays on the keypad, return to step 1 to enter another character or press CMD if finished.

Table 2: Greek Characters
PANIC KEY OPTIONS

2-Button Panic Keys
All keypads offer a panic key function that allows users to send panic, emergency, or fire reports to the central station in an emergency. Enable the panic key function in the keypad user menu. Place the supplied icon stickers below the top row select keys. The user must press and hold the two select keys for two seconds until a beep is heard.

- Panic (left two select keys)—Zone 19 + Device Address
- Emergency Non-Medical (center two select keys)—Zone 29 + Device Address
- Fire (right two select keys)—Zone 39 + Device Address

7/0 Panic Keys
All keypads allow the user to initiate a panic alarm by pressing the 7 and 0 (zero) keys at the same time for one-half (1/2) second. Enable the 7/0 Panic function in Installer Options. When enabled, all keypads send a Zone Short message to the panel for the first zone of the keypad address. When the keys are released, a Zone Restore message can be sent from the initiating keypad. To produce a panic alarm, program the first zone of the keypad address as a panic type (PN) in panel programming. Place a 1k Ohm end-of-line (EOL) resistor, DMP Model 311, across the white/brown pair of zone wires on models 7070/A, 7073/A, 7170, and 7173. A Zone Restore message sends when the keys are released. The 1k Ohm EOL resistor is not required on 7060/A, 7063/A, 7160, and 7163 keypads.
**USER OPTIONS MENU**

To access the Options menu, press and hold the back arrow and **CMD** keys for 2 seconds.

**Backlighting Brightness**
Adjust the LCD display brightness level, power and armed LEDs, the green keyboard, and the logo backlighting. At **SET BRIGHTNESS**, use the left select key to decrease the brightness and the right select key to increase the brightness. If the brightness level is lowered, it reverts to maximum intensity whenever a key is pressed. If no keys are pressed, and the speaker has not sounded for 30 seconds, the user-selected brightness level restores.

**Internal Speaker Tone**
Adjust the keypad internal speaker tone. At **SET TONE**, use the left select key to decrease the tone and the right select key to increase the tone.

**Internal Volume Level**
Adjust the keypad internal speaker volume for key presses and entry delay tone conditions. During alarm and trouble conditions, the volume is always at maximum level. At **SET VOLUME LEVEL**, use the left select key to decrease the volume and the right select key to increase the volume.

**Model Number**
Display the keypad model number, firmware version, and date.

**Keypad Address**
Display the current keypad address.
1 **REMOVE THE COVER**

The keypad housing is made up of two parts: the cover, which contains the circuit board and components, and the base.

To separate the keypad cover from the base, insert a flathead screwdriver into one of the slots on the bottom of the keypad and gently lift the screwdriver upward. Repeat with the other slot. Gently separate the cover from the base and set the cover containing the keypad components aside. See Figure 3.

![Figure 3: Separate the Keypad Housing](image-url)
2 WIRE THE KEYPAD

Each keypad model has specific wiring assignments. All zones are supervised. Use 1k Ohm EOL resistors, DMP Model 311 on keypad zones 1-4. Locate the keypad model below and refer to Figure 5 to wire the keypad.

Models 7060/A, 7063/A, 7160, and 7163
Supplied with a 4-wire harness for panel keypad bus connection.

Models 7070/A, 7073/A, 7170, and 7173
Supplied with a 12-wire data bus/zone harness. Four wires connect to the keypad bus. The remaining eight wires are for the four zone inputs, four wires for each zone.

Models 7073/A and 7173
Supplied with a 5-wire output/reader harness and a 12-wire data bus/zone harness.

Firmly grasp the wires near the base and hold the outside edges of the keypad housing. Line up the red and yellow wires with the guides on the board to inset the connector into the J5 keypad terminal. Observe wire colors when connecting the red, yellow, green, and black wires to the keypad bus. See Figure 4.

- Connect red wire to panel terminal 7
- Connect yellow wire to panel terminal 8
- Connect green wire to panel terminal 9
- Connect black wire to panel terminal 10

Figure 4: Wiring Harness
Additional Power Supply
If the current draw for all keypads exceeds the panel output, provide additional current by adding a Model 505-12 auxiliary power supply.

1. Connect all keypad black ground wires to the power supply negative terminal.
2. Run a jumper wire from the power supply negative terminal to the panel common ground terminal.
3. Connect all keypad power (+12 VDC) wires to the power supply positive terminal. Do not connect the power supply positive terminal to any panel terminal. Refer to the 505-12 Power Supply Installation Guide if needed (LT-0453).

Keypad Bus Monitor
For listed fire protective systems, the 893A Module or 277 Trouble Sounder must be installed on the XR150/XR550 Series panel to monitor the keypad bus. It should be programmed to sound when the keypad bus fails to operate.
Green/White – Connect Reader Data 0
White – Connect Reader Data 1
Orange – Door Strike N/O
Gray – Door Strike C
Violet – Door Strike N/C

Yellow/White  – Zone 4
White/Yellow – Zone 3
Orange White – Zone 3
White/Orange – Zone 2
Red/White  – Zone 2
White/Red  – Zone 1
Brown/White – Zone 1
White/Brown – Zone 1

Black – Ground
Green – Receive Data
Yellow – Send Data
Red – Keypad Power

*All zones are supervised and suitable for fire applications.
*Maximum zone line impedance is 100 Ohms.
*Ground fault detected at 1420 Ohms or less.

Figure 5: Keypad Back Showing Wiring
Harness Assignments
3 WIRE FOR ACCESS CONTROL

Internal Access Control Reader
The 7063/A, 7073/A, 7163, and 7173 keypads provide a built-in proximity card reader that is compatible with most standard 125 kHz proximity credentials. An external 13.56 MHz proximity reader can be connected and will be compatible with 13.56 MHz proximity credentials. For a list of publicly supported card formats, see Public Card Formats.

**Note:** Some proximity credentials are not compatible with DMP proximity keypads. Test the intended proximity credentials with the application before installation. DMP does not guarantee compatibility with credentials not purchased from DMP.

External Access Control Reader
To accept Wiegand data input from other external card readers, connect a 12 VDC external reader to a 7073/A or 7173 keypad. Connect the red and black power wires from the reader to the power wires from the panel. These connect in parallel with the keypad power wires. Connect the reader (Data 1) wire to the white wire on the 5-wire keypad cable. Connect the reader (Data 0) wire to the green/white wire on the 5-wire keypad cable. See Figure 6.
Figure 6: Access Control Wiring

- **Green/White**: Connect Reader Data 0
- **White**: Connect Reader Data 1
- **Orange**: Door Strike Normally Open
- **Gray**: Door Strike Common
- **Violet**: Door Strike Normally Closed

- **Black**: Ground
- **Green**: Receive Data
- **Yellow**: Send Data
- **Red**: Keypad Power

*Only the green/white, white, black, and red wires connect to the external card reader.*
4 WIRE THE ELECTRONIC LOCK

The 7073/A and 7173 keypads provide one internal programmable Form C single pole, double throw (SPDT) relay for controlling door strikes or magnetic locks. Three wires on the 5-wire harness, violet normally closed (N/C), gray common (COM), and orange normally open (N/O), allow you to connect devices to the relay. The Form C relay draws up to 15 mA of current and the contacts are rated for 1 Amp at 30 VDC maximum.

5 WIRE THE 333 SUPPRESSOR

One Model 333 Suppressor is included with the 7073/A and 7173 keypads. If the device being controlled by the relay is connected to the N/O and C wires, install the suppressor on the N/O and C wires. If the device is connected to the N/C and C wires, install the 333 on N/C and C wires. See Figure 7.
Figure 7: 5-Wire Harness and 333 Suppressor Installation
**Door Strike Relay Operation**

When the user code sent from the reader is verified by the panel, the keypad door strike relay activates for five seconds. During this time, the access door connected to Zone 2 must be opened to start the programmed entry/exit timer and Zone Bypass if programmed and used. The five second door strike is panel programmable when the keypad is used on an XR150/XR550 Series panel.

**Zone 2 Door Contact with Bypass**

If the door being released by the 7073/A and 7173 keypad is protected, you can provide a programmed bypass time by connecting its contact to Zone 2 (white/red pair) on the keypad and enabling the bypass feature. Door contacts may be N/C or N/O.

**Zone 3 Request to Exit**

You can also connect a N/O PIR (or other motion sensing device) or a mechanical switch to Zone 3 (white/orange pair) on the 7073/A and 7173 keypad to provide Request to Exit (REX) capability. When Zone 3 shorts, the keypad relay activates for 5 seconds. During this time, the user can open the protected door to start the programmed Bypass entry/exit timer. If the door is not opened within five seconds, the relay restores to its locked state. A Zone 3 REX is inhibited for three seconds after the keypad reads a card and a door strike occurs. This is to allow area entry and pass under a REX PIR.
PROGRAM THE KEYPAD

Keypad Options and Keypad Diagnostic menus allow install and service technicians to configure and test keypad operation. To access the installer options:

1. Hold down the back arrow and **CMD** keys for two seconds.
2. At **SET BRIGHTNESS**, enter 3577 (INST) and press **CMD**.

The display changes to **KPD OPT KPD DIAG** and **STOP**. The Keypad Options menu allows you to set the keypad address, select Supervised or Unsupervised mode, change the default keypad message, selectively enable the 2-button Panic keys, Bypass, REX, and set entry card options.

All programming options display on all keypads. However, actual operation for some programming options is restricted to the appropriate model.

**KEYPAD OPTIONS**

<table>
<thead>
<tr>
<th>KPD</th>
<th>KPD OPT</th>
<th>DIAG</th>
<th>STOP</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>CURRENT KEYPAD ADDRESS:</strong></td>
<td>1</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Keypad Options**

To program keypad options, press **KPD OPT**.

**Current Keypad Address**

Set the current keypad address from 01 to 08 for XT30/XT50/XR150 Series panels or 01 to 16 for XR550 Series panels. The default address is 01. To change the current address, press any select key and enter the new address. Do not enter a leading zero for addresses 01 to 09.
Keypad Mode
Keypads with programmed zones must be supervised and cannot share an address with other keypads. Unsupervised keypads can operate together sharing the same address, but cannot be used when Device Fail Output has a programmed value other than zero. To select a keypad mode, press the select key under **SUP** or **UNSUP**. An asterisk appears next to the selected option.

Default Keypad Message
Enter a custom message of up to 16 characters to appear at the top of the keypad display. Press any select key, enter a new message, and press **CMD**.

Arm Panic Keys
Use this option to configure the select keys as two-button panic keys. To enable or disable a panic option, press the select key under the desired name: **PN** (panic), **EM** (emergency), and **FI** (fire). Press the select key again to disable the panic option. Once the panic option is enabled, an asterisk displays next to the selected option(s).

7/0 Panic
Press the fourth select key to choose **YES**, configuring the 7 and 0 keys as two-button panic keys. Select **NO** to disable the option. Default is **NO**.
**Activate Zone 2 Bypass (7073/A, 7173 only)**
Select **YES** to activate the zone 2 bypass operation. Selecting **NO** allows standard zone operation on zone 2. The default is **NO**.

**Zone 2 Bypass Time (7073/A, 7173 only)**
Enter the number of bypass seconds to elapse before the bypass timer expires. Range is 20-250 seconds. Press any select key to enter the number of seconds. Once the door strike relay is activated, the user has five seconds to open the door connected to zone 2. The zone is then bypassed for the programmed time or until the contact restores to normal. Ten seconds prior to the expiration of the bypass time, the keypad beeps if the door is still open. If the door remains open when the timer expires, a zone open/short is sent to the panel for zone 2. Default is 40 seconds.

**Relock on Zone 2 Fault? (7073/A, 7173 only)**
Select **NO** to leave the relay on when zone 2 faults to an open or short condition during bypass. Select **YES** to turn the relay off when zone 2 faults open or short during bypass. Default is **NO**.
**Activate Zone 3 Exit (7073/A, 7173)**
Select **YES** to enable the Request to Exit feature on zone 3. When zone 3 shorts, the keypad relay activates. During this time, the user can open the protected door to start the programmed bypass entry/exit timer. If the door is not opened within the time programmed in the Zone 3 REX Strike Time, the relay restores the door to its locked state. No panel programming is required.

**Zone 3 REX Strike Time (7073/A, 7173)**
Enter the number of REX seconds to elapse. Range is 5-250 seconds. Press any select key to clear the keypad display and enter the number of seconds. The default is 5.

**ALL? NO YES (7063/A, 7073/A, 7163, 7173)**
Select the number of seconds (1-9) the keypad should wait when an area system displays **ALL? NO YES** during arming/disarming or a HOME/SLEEP/AWAY system waits during arming only. If **NO** or **YES**, or **HOME**, **SLEEP**, or **AWAY** is not manually selected before the delay expires, the keypad automatically selects **YES** or **AWAY**. Select zero (0) to disable this feature. The delay also occurs when any credential is presented for arming the Home/Sleep/Away system. Default is 2.
CUSTOM CARD FORMAT

Any Card Format (7063/A, 7073/A, 7163, 7173)
Select YES to allow all card reads to activate the door strike relay. The door strike relay is activated for the length of time programmed in ZN 3 REX TIME. No user code information is sent to the panel. Default is NO.

Card Formats (7063/A, 7073/A, 7163, 7173)
Select the slot number (1-7) that you would like to program a custom non-DMP card format into. Select 8 if you would like to program a DMP card format. See Public Card Formats for a list of card formats that can be used with the keypad. Other private or custom formats may also be compatible. Please contact the credential supplier or manufacturer for the bit structure. Press CMD to advance.

Format Name (7063/A, 7073/A, 7163, 7173)
Press any select key to rename the card format. Press CMD to save and advance.
**Wiegand Code Length (7063/A, 7073/A, 7163, 7173)**

When using a custom credential, enter the total number of bits to be received in Wiegand code including parity bits.

Press any select key to enter a number between 1-255 to equal the number of bits. Default is 26 bits.

An access card contains data bits for a site code, user code, and start/stop/parity bits. The starting position, location, and code length must be determined and programmed into the keypad. See Figure 8.

![Wiegand Data Stream Bit Location](image)

In this example the Wiegand Code Length = 26 bits.

**Figure 8: Wiegand Data Stream Bit Location**
Site Code Position and Length (7063/A, 7073/A, 7163, 7173)

Enter the site code start position and length in the data string. Press select key 2 to clear the site code start position and enter a number between 0-255. Press **CMD** to save. Default is **1**.

Press select key 4 to clear the site code length and enter a number between 1-24. Press **CMD** to save. Default is **8**.

User Code Position and Length (7063/A, 7073/A, 7163, 7173)

Define the user code start bit position and length. Press select key 2 to clear the user code position and enter a number between 0-255. Press **CMD** to save. Default is **9**.

Press select key 4 to clear the user code length and enter a number between 16-64. Press **CMD** to save. The default is the DMP value of **16**.
Require Site Code (7063/A, 7073/A, 7163, 7173)
Press the select key under **YES** to use a site code and press **CMD** to view the site code entry display. Press **NO** to advance to **NO OF USER CODE DIGITS**. Default is **NO**.

In addition to user code verification, door access is only granted when any one site code programmed at the **SITE CODE** option matches the site code received in the Wiegand string.

Site Code (7063/A, 7073/A, 7163, 7173)
You can program up to eight 8-digit site codes. The site code range is 0-16,777,214.

In the keypad display, enter site code 1 and press **CMD**. The display will ask for site code 2 followed by site code 3 and so on. When you have selected the site code you want to change, press **CMD**.

Number of User Code Digits (7063/A, 7073/A, 7163, 7173)
The keypad recognizes user codes from 4 to 12 digits in length. Press any select key to clear the keypad display and enter the user code digit length being used by the panel. Default is **5**. For an XR150/XR550 area type, use 4-10 digits (typically 5). For all other systems and panels, use 4 digits.
**No Communication with Panel (7063/A, 7073/A, 7163, 7173)**

Define the relay action when communication with the panel has not occurred for 5 seconds. Default is **OFF**. Press any select key to change the default relay action:

Press the first select key to choose **OFF** (Relay Always Off). The relay does not turn on when any Wiegand string is received. **OFF** does not affect any REX operation. If communication is lost during a door strike, the relay remains on for the door strike duration but turns off at the end of the door strike timer.

Press the second select key to choose **SITE** (Accept Site Code). Door access is granted when the Wiegand site code string received matches any site code programmed at **SITE CODE DISPLAY**. Refer to **REQUIRE SITE CODE** for more information.

Press the third select key to choose **ANY** (Any Wiegand Read). Access is granted when any Wiegand string is received.

Press the fourth select key to choose **ON** (Relay Always On). The relay is always on.

Press **CMD** to display the next action.
Press the first select key to choose **LAST** (Keep Last State). The relay remains in the same state and does not change when communication is lost.

**Keypad Language**

Define the keypad’s language. Default is **ENGLISH**.

Press any select key to change the language options.

Press select key 1 to select English. Press select key 2 to select Spanish. Press select key 3 to select French. Press select key 4 to select Dutch.

Press **CMD** to advance the language options.

Press select key 1 to select Greek. Press select key 2 to select Czech.
**ADDITIONAL PROGRAMMING**

Users can manually enter their user code into the keypad which then verifies the user code and its authority with the panel. The 7073/A and 7173 activate the on-board Form C relay releasing a door strike or magnetic lock. To provide added flexibility, the keypad allows connection of an external Wiegand output compatible reader.

**Proximity Credential Compatibility**

DMP keypads with internal proximity readers are compatible with most standard 125 Khz proximity credentials. An external 13.56 MHz proximity reader can be connected and will be compatible with 13.56 MHz proximity credentials. For a list of publicly supported card formats, see Public Card Formats.

*Note:* Some proximity credentials are not compatible with DMP proximity keypads. Test the intended proximity credentials with the application before installation. DMP does not guarantee compatibility with credentials not purchased from DMP.

**Program a Credential**

1. Access the User Menu by pressing **CMD** until **MENU? NO YES** displays. Choose **YES**, and present your proximity credential to the reader or manually enter your user code at the keypad.
2. Press **CMD** until **USER CODES?** displays.
3. Press any select key. Choose **ADD**.
4. At **ENTER CODE: -**, present the credential to the reader. The keypad works by reading the user code from the data string sent by the access control reader.
Test the keypad to ensure alarm backlighting, individual shortcut keys, and any programmed zones work. To begin testing, access the Installer Options menu. Hold down the **back arrow** and **CMD** keys at the same time until **SET BRIGHTNESS** displays. Enter **3577** and press **CMD**.

**Keypad Diagnostics**
Press the select key under **KPD DIAG**. The keypad lights all display segments and illuminates the keyboard in red. The display backlighting then changes to green. The keypad alternates between these two states for approximately two minutes. Press **CMD** at any time to begin testing individual keys.

**Test Individual Keys**
The display changes to **PRESS KEY TO TEST**. This option tests each key on the keyboard to ensure it is operating properly. Press and hold each key for two seconds. The key number being held appears in the display. Verify the correct number displays before testing the next key.
Zone Test (7070, 7073/A, 7170, 7173)
This option allows the keypads to display the current electrical status of the four protection zones. The status is shown as **OPEN**, **SHRT**, or **OKAY**. The zone test displays on the other keypads but is not operational.

Input Wiegand (7063/A, 7073/A, 7163, 7173)
This option tests the internal and external reader input from proximity credentials. The display shows **OKAY** each time a good proximity read is received.

Exiting the Installer Options
When done, press **CMD** once to return to the Installer Options screen. Press the select key under **STOP** to exit the Installer Options function.
This section covers 7063/A, 7073/A, 7163, and 7173 keypads and contains three sections:

- Keypad Arming and Disarming
- Keypad Access Control
- Keypad Entry Delay

All of the examples displayed assume that **CLOSING CODE** is **YES** in panel programming.

Figures 9 through 12 show the user presenting a card to the keypad. When an external reader is connected to a 7073/A and a 7173 keypad, the user presents a card to the reader rather than to the keypad.
KEYPAD ARMING AND DISARMING

Area System Arming and Disarming
1. Press CMD until the keypad displays ARM DISARM.
2. Press the select key under the preferred option.
3. The keypad displays ENTER CODE: -. The user presents their card to the reader.

Once validated by the system, all areas assigned to that code arm or disarm automatically and the 7073/A and 7173 keypad door strike relay activates. See Figure 9.

Select NO to arm or disarm individual areas.
Select YES, or simply wait, to automatically arm or disarm all areas for which you are authorized.

Figure 9: Area Arming and Disarming
All/Perimeter System Arming and Disarming
Present the card to the reader or press CMD, the keypad displays DISARM? or PERIM ALL (when arming). Press the select key under the desired option. The keypad displays ENTER CODE: -. Present the card to the reader. Once validated by the system, the selected areas arm or disarm automatically. On 7073/A and 7173 keypads, the Door Strike relay then activates.

Home/Away System Arming and Disarming
Present your card to the reader. If the system is armed, once the card is validated, all areas are disarmed and the keypad displays ALL SYSTEM OFF. If the system is disarmed when you present your card, once the card is validated, HOME SLEEP AWAY displays. Manually select HOME, SLEEP, AWAY or after a short time-out, all areas automatically arm in the AWAY mode.

The system arms or disarms the areas and activates the door strike relay on the 7073 or 7073A keypad.

Figure 10: All Perimeter Arming and Disarming
**KEYPAD ACCESS CONTROL**

**Area and All/Perimeter Door Strike**
From the Status List, present your card to the reader. Once the system validates the card, the Door Strike relay activates. Home/Away systems only activate the 7073/A, and 7173 Door Strike relay when arming and disarming.

While the keypad displays the Status List, present your access card.

Typically, the relay activates for 5 seconds during which time you can open the door. Once you open the door, you have 40 seconds to exit and close the door before the Zone 2 Bypass expires.

![Figure 11: Present Access Card](image-url)
KEYPAD ENTRY DELAY

All Systems
Once the entry delay starts, the keypad sounds an entry tone and displays **ENTER CODE: -**. Present your card to the reader. Once validated, the system disarms all areas accessible by you and activates the 7073/7073A/7173 Door Strike relay. Area systems provide a delay to allow selected areas only to be disarmed. See Keypad Arming and Disarming.

Entry delay starts. The System disarms the area and activates the Door Strike Relay.

**Figure 12: Entry Delay**
WIRING SPECIFICATIONS

When planning a keypad bus installation, keep in mind the following specifications:

- DMP recommends using 18 or 22 AWG unshielded wire for all keypad and LX-Bus circuits. Do not use twisted pair or shielded wire for LX-Bus and keypad bus data circuits. To maintain auxiliary power integrity when using 22-gauge wire, do not exceed 500 feet. When using 18-gauge wire, do not exceed 1,000 feet. Install an additional power supply to increase the wire length or add devices.

- Maximum distance for any one circuit (length of wire) is 2,500 feet regardless of the wire gauge. This distance can be in the form of one long wire run or multiple branches with all wiring totaling no more than 2,500 feet. As wire distance from the panel increases, DC voltage on the wire decreases.

- Maximum number of devices per 2,500 feet circuit is 40.

  **Note:** Each panel allows a specific number of supervised keypads. Add additional keypads in the unsupervised mode. Refer to the panel installation guide for the specific number of supervised keypads allowed.

- Maximum voltage drop between the panel (or auxiliary power supply) and any device is 2 VDC. If the voltage at any device is less than the required level, add an auxiliary power supply at the end of the circuit. When voltage is too low, the devices cannot operate properly.

COMPLIANCE SPECIFICATIONS

ULC Commercial Burglary for XR150/XR550 Series Panels
The keypad zones cannot be used for ULC listed applications.

Specifications
Operating Voltage  12 VDC
Thinline/Aqualite Dimensions  7” W x 5.25” H x 0.5” D

Compatibility
All keypads are compatible with all DMP panels.

Certifications
California State Fire Marshall (CSFM)
FCC Part 15 RFID Reader FCC ID: CCKPC0086 — Thinline and Aqualite

FCC INFORMATION

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications made by the user and not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
INDUSTRY CANADA INFORMATION

This device complies with Industry Canada Licence-exempt RSS standard(s). Operation is subject to the following two conditions:

1. This device may not cause interference, and
2. this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes:

3. l'appareil ne doit pas produire de brouillage, et
4. l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

This system has been evaluated for RF Exposure per RSS-102 and is in compliance with the limits specified by Health Canada Safety Code 6. The system must be installed at a minimum separation distance from the antenna to a general bystander of 7.87 inches (20 cm) to maintain compliance with the General Population limits.

L'exposition aux radiofréquences de ce système a été évaluée selon la norme RSS-102 et est jugée conforme aux limites établies par le Code de sécurité 6 de Santé Canada. Le système doit être installé à une distance minimale de 7,87 pouces (20 cm) séparant l'antenne d'une personne présente en conformité avec les limites permises d'exposition du grand public.
