

HOME SECURITY

stay safe
by being connected

the security of being connected

You want your security system to not only alert you when there's trouble. You also want it to summon help when it's needed. That requires a dependable communication link between your system and the monitoring service you've selected.

Other systems rely on traditional dial-up communication between your system and monitoring service. With the XT Series™ security system you can connect to your monitoring service using Internet, cellular GPRS and/or traditional dial-up.

Whether you are worried about phone wires being downed by severe weather or the possibility of wires being intentionally cut, the XT Series system gives you more communication options. You can feel confident that when your system detects trouble and tries to call for help, the message will quickly and reliably get through. You'll be constantly connected, and your home and family will be continuously protected.

Ask us about receiving email/text messages from your alarm system, and sending text commands to control the system.

CONNECT FROM ANYWHERE WITH MYACCESS™ MESSAGING FEATURES

You can control your alarm system via SMS text commands from your cell phone or mobile device. Arming and disarming your system or checking system status is as fast and easy as dialing your phone.

You also have the option to automatically receive status messages and alarms directly to your cell phone, mobile device, and/or email. You will be notified

that your system has been turned on or off, or an alarm has occurred. With XT Series MyAccess features, you can be constantly aware of what's happening at home.

CONCERNED ABOUT WIRES? GO WIRELESS

More homeowners are taking advantage of the benefits of wireless technology for their security systems. Wireless systems can cost less, and there's no need to drill through walls or rip up carpets to run wires.

Home Security System

Monitoring Service

monitoring adds both security and features

Relying on a security monitoring service means that help will quickly be dispatched when your alarm system detects a problem. That's a critical benefit. But relying on a monitoring service also lets you take advantage of the MyAccess messaging features... the ability to remotely control your system from your cell phone, and to receive text or email message alerts from your system.

Another benefit of this technology is the convenience that comes with it, including wireless key fobs. These remote controls — similar to the fobs used

for your car — let you operate your alarm system without using the keypad or security codes.

With all these benefits, wireless systems still provide uncompromised protection and peace of mind.

SECURITY YOU CAN DEPEND ON

Today's systems are remarkably advanced yet simple to use, and offer a wide selection of features and functions. Your local security system professional can help you create a customized system that exactly meets your needs, including the right technology to keep you, your family, and your home safe and secure.

Some features are not available with all systems. Some features are optional. Please discuss this and other options with your local security system professional.

MORE FEATURES EQUALS STRONGER SECURITY

- ▶ Keypad shortcut keys provide fast, one-button access to the most commonly used functions. HOME allows you to arm the perimeter of your house. SLEEP arms both the perimeter and specified areas in your house, so you can still move around. AWAY arms the entire premises.
- ▶ The Cancel/Verify™ feature lets you instantly cancel a false alarm to avoid an unnecessary response or, more importantly, verify an alarm to quickly summon help.
- ▶ The Armed Silence™ feature allows your system to remain armed (on) after an alarm is silenced, unlike other systems that require you to disarm (disable) your system to turn the sirens off, leaving you unprotected.
- ▶ Multiple communication methods between your system and monitoring service give you the confidence that, should trouble arise, you'll have a fast response.
