

integration provides

SECURITY WITH SIMPLICITY

A single control panel serves all intrusion, fire, access control and communications needs, simplifying operation for employees and users. Network and cellular communications are built into each panel, making it possible to manage security at your facilities, whether they are located close or across the country.

the SECURE CHOICE

You can rely on the quality of DMP products, installed by highly qualified professional technicians who are part of our authorized dealer network. Whether you're looking for solutions to protect government facilities, financial institutions, commercial, retail, or residential applications, DMP technology is the secure choice.

WE KNOW SECURITY

Founded in 1975, DMP is a privately-held independent manufacturer of intrusion, fire, access control, and cellular alarm products.

DMP technology is available exclusively through our authorized dealer network of professional electronic security dealers. We have a unique status as the only independently-owned security manufacturer that designs and builds all of our products in the United States using U.S. and global components. Our factory, call center, engineering, and distribution is located in Springfield, MO right where we started the business over 40 years ago.

We continue to build on our reputation for excellence in technology, service, and design by releasing innovative security and communication solutions for both residential and commercial customers. We add new features, functions, and capabilities tailored to dealer's needs, and constantly strive to make our technology easier to use.

COMMUNICATION is key

Enhanced communications are available with every system, ensuring integrity while providing added features and convenience.

Systems of all sizes can include on-board network, cellular, and dialer capabilities, up to eight communication paths, providing flexible communications that deliver reliable primary and backup paths between the panel and Monitoring Center.

The on-board network and cellular communications allow users to receive system status messages and alarms via SMS text or push notifications. Users can also completely control their system from an app or their web browser.

meeting TODAY'S STANDARDS

DMP products meet today's standards:

- ▶ Many UL, ULC, ETL, and NFPA listings and approvals
- ▶ NIST Certified AES Encryption
- ▶ Cellular Communicators are approved for use on Verizon, AT&T, and more
- ▶ Products designed with your privacy and security at the forefront

features with REAL BENEFITS

- ▶ **DMP access & security management software gives enterprise-level users point-and-click control via a graphical user interface.**
- ▶ **With eight paths of communication, you can provide redundancy options for disaster recovery.**
- ▶ **Virtual keypads let you connect to a DMP panel from a web browser or app anywhere in the world.**
- ▶ **Convenient shortcut-keypad keys provide optional one-touch arming/disarming and other functions.**
- ▶ **A long system life provided by extensive backward and forward compatibility, enables trouble-free upgrades rather than a total system replacement.**
- ▶ **Keypads combine good looks with ease of use.**
- ▶ **Powerful integration of home automation components like lights, locks, thermostats, and more.**
- ▶ **CANCEL/VERIFY™ feature provides quick cancellation of false alarms and instant confirmation of actual alarms.**
- ▶ **Keypads illuminate as red even after the alarm is silenced, providing a visual alarm that alerts users to potential danger.**
- ▶ **Hybrid and wireless systems use two-way supervised wireless technology.**
- ▶ **Unmatched product quality with products designed and manufactured exclusively in the USA according to ISO standards with U.S. and global components.**
- ▶ **Open architecture provides easy integration with technology from other manufacturers.**
