

Virtual Keypad™

FEATURES

- ▶ Manage user codes
- ▶ Schedules: Manage Z-Wave®, Favorites, outputs and arming schedules
- ▶ False alarm video verification
- ▶ Exclusive Rooms feature gives users the easiest control screen available
- ▶ Control/manage multiple systems from the same app
- ▶ Users can easily control their systems using their smartphones
- ▶ Arm, disarm and check system status
- ▶ Selectively arm and disarm areas
- ▶ Check history and receive push notifications
- ▶ User code management
- ▶ Door control and the Lockdown feature (XR Series and XT Series™ Panels)
- ▶ Zone Status
- ▶ Custom Actions
- ▶ Sensor Activity push notifications for up to 50 zones
- ▶ Customize the app with your company logo, contact information and social media links
- ▶ Supports Z-Wave® control, Favorites, Actions and Rooms
- ▶ Geofences trigger Z-Wave Favorites and Smart Arming
- ▶ Supports remote camera access for up to 16 cameras
- ▶ System user code required to connect to app
- ▶ Faulted zones display upon arming
- ▶ Video Verification
- ▶ Red screen in alarm
- ▶ False alarm question
- ▶ Refer a friend

BRANDED INTERFACE

With the Virtual Keypad app, you can upload your logo so your customers will be reminded of the service you provide every time they log in.

ELEGANT USER INTERFACE

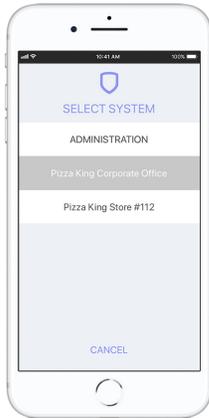

The Virtual Keypad app provides users with a clean, elegant, easy-to-use interface. Controls are logically arranged with all functions just a tap away.

CUSTOMER SETUP

Setting a customer up to use Virtual Keypad is a three-step process, accomplished from the SecureCom™ Admin Login.

First, add a user as a “new customer.”

Dealers can invite their customers to begin using the app on their iPhones, iPads or Androids. Virtual Keypad allows users to arm or disarm and check the status of their cellular, network or Wi-Fi connected DMP security systems from anywhere they have cell or Wi-Fi service. They can also access any Z-Wave automation devices programmed through their DMP panels.

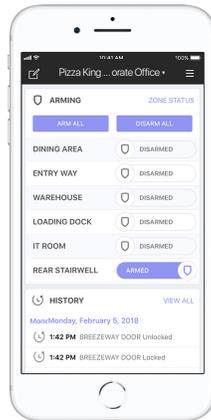

SIMPLE USER OPERATION

Users log in with their email and password. They can select the system they want to control from the drop-down list of available systems.

Forgotten passwords are easily retrieved by user request. A new, temporary password will be sent to the user’s email. Users can also change passwords.

AREA ARMING/DISARMING

For residential or commercial systems that include areas, users can selectively arm, disarm or check the status of any area from their smartphones with the tap of a button on their screen. This enables them to maintain protection for certain areas while allowing access to only the selected areas.

NOTIFICATIONS

Users can set their own alerts by selecting the message category in Push Notifications. Users can view notification history. A Burglary Alarm Push Message displays on a smartphone when the system goes into alarm. Tap on the message to immediately open the app.

RED ALARM STATUS

A red arming area will display if an alarm is occurring while the user is logged in.

ENHANCED VIDEO VERIFICATION

For quick verification of an alarm the user can launch the app directly from the Alarm Push Notification into a screen that has the video camera views available. The user can simply respond to the question “Is This A False Alarm?” displayed within that screen.

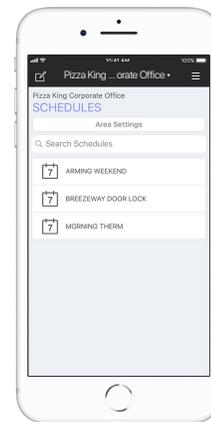

FAULTED ZONE

When a faulted zone is encountered during the arming process, the system will display an Alert Message listing the faulted zone(s) and options for Okay, Bypass or Stop. Okay will force arm all faulted zones. Bypass will bypass all faulted zones. Stop will stop the system from arming. A zone that is force armed is restored into the system if it later returns to normal. A zone that is bypassed remains bypassed until the system is disarmed.

SCHEDULES

Users can add, edit or delete schedules. Schedules affect arming, area arming, outputs, doors and Favorites. When the tab is selected, all the schedules assigned to the current system are listed.

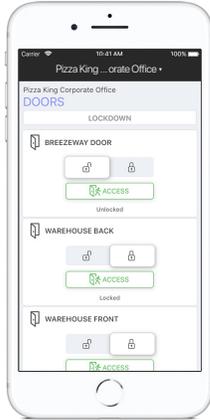

ZONE STATUS

This allows users to easily check one screen for the current status of all zones on a system. A yellow triangle indicates faulted zones.

DOOR ACCESS

Virtual Keypad gives users real-time access control with the XR and XT Series panels. Users can lock or unlock multiple doors.

DOOR STATUS

Use this tab to quickly verify the current status of a system's doors. This is a panel setting per door.

LOCKDOWN

Lockdown is available for XR Series panels by selecting Lockdown. All Public Doors and Z-Wave doors will lock on the system with a single click.

CONTROL OUTPUTS

Users are increasingly integrating their control panel with other technology and systems via outputs. Each output can be programmed to appear as a button in the app. Users can control outputs such as watering systems, garage or overhead doors and lighting by turning them on or off with a slide of their button.

HOME AUTOMATION FEATURES

With Z-Wave added to the system, users have the ability to control connected lights, thermostats, exterior door locks and other Z-Wave enabled devices. Their laptops become a wireless control center for their entire home or business.

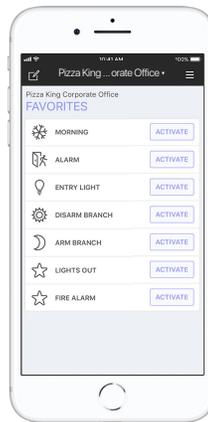

Z-WAVE FAVORITES

With System Actions, panels can be programmed to trigger Favorites upon arming and disarming events.

Users can define a set of parameters for their security systems and multiple Z-Wave modules, then give that set an easily remembered name for one-click control. Favorites can also be placed on a schedule. For instance, at bed time, users could create the "Good Night" Favorite that would turn out or dim connected lights, lock doors, adjust the thermostat and arm the system, all with one click.

This integrates with popular home devices like Apple TV and Amazon Alexa.

MANAGE USER CODES

You can configure accounts to include user code management. This provides the system manager/owner with access to all authorized system users and the ability to add, delete and modify users and edit their codes.

For XT Series and XTL Series™ systems, system managers can assign authority levels to each user. (Master: Full authority or Arm Only authority.) They can also assign users as Temporary, which are automatically deleted in seven days.

For XR Series panels, the system manager can create up to 99 profiles, each with defined capabilities. Users are then assigned to up to four of these profiles. For Temporary users, the system manager can specify the date when the rights will expire.

VIDEO CAPABILITIES

Users can remotely access the DMP wireless or hardwired IP video cameras via the app. They can have up to 16 cameras and remotely view the images on their smartphones or tablets. In addition to automatically recording video based on an event (camera detects movement), you can set your recording preferences to "Record Only When Armed" or "Record Always" as well as view live video.

COMMERCIAL AND RESIDENTIAL APPLICATIONS

Business owners appreciate the ability to manage their security from an app, whether they are in the office, at home or on the road. They can easily access multiple business locations by choosing the desired system from the dropdown list.

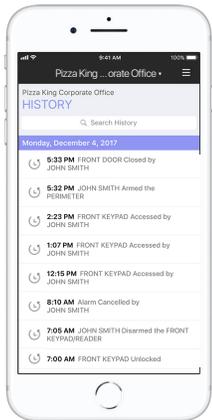

Residential users also appreciate the ability to control their systems from an app anywhere in their homes or while they are away from home.

HISTORY

Users can review system activity from the History tab. Messages include:

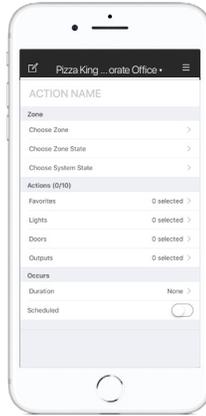

- ▶ Alarm Events
- ▶ Arm/Disarm or Open/Close Events
- ▶ Troubles
- ▶ Sensor Activity
- ▶ Custom Actions
- ▶ Access Events

Quick Search saves time when looking for a specific event. Enter a phrase, and it narrows the system history.

CUSTOM ACTIONS

Set up Custom Actions in Virtual Keypad under the Actions section.

VIDEO DOORBELL

The Video Doorbell is fully supported by the Virtual Keypad app. This lets customers check in on their homes whenever they'd like. Any time motion is detected or the doorbell is pressed, they'll receive a notification and be able to monitor who's approaching with 1080P precise clarity, 180-degree field of view and Pinch-to-Zoom technology for a closer look.

EXPANDED VIDEO FEATURES

DMP's network video recorder (NVR) works hand-in-hand with Virtual Keypad Access™ to expand storage and manipulate multiple cameras. The NVR has ports for up to eight networked cameras and can store up to 2 terabytes of footage. You can access that entire footage from the NVR or directly from VirtualKeypad.com or the Virtual Keypad app. It's fast and simple to view security footage in live view.

Supporting ONVIF™ and SecureCom Wireless™ video cameras, our PoE NVR can be installed virtually anywhere as long as it's on the same LAN network as the IP cameras.

ADMINISTRATION

Set up and manage user codes and schedules once for multiple panels. For facilities with multiple systems, this definitely saves time.

MANAGE CREDENTIALS

This allows you to choose either User Code or credential all in one record. For example, John Smith may have multiple credentials (a card, user code, fob and prox patch) all managed under his authority or profile. This credentialing hierarchy makes data entry faster and easier to manage.

Compatibility
