FEATURES

- Works from any Internet-connected computer using most popular browsers
- Log on to VirtualKeypad.com with log in and system user code
- Manage user profiles
- Manage credentials and user codes
- Up to 20 customizable actions that can be programmed into the XR and XT panels
- Manage holiday dates
- Manage multiple systems from a single login
- Notification of faulted zones when arming
- Available real-time door status

- Remotely manage the security system on a tablet or computer
- Arm/Disarm
- Control lights, locks and thermostats
- View and record video
- Manage system users, schedules and profiles
- Lockdown Public Doors on the XR150/XR550 Series™ panels
- Arming section turns red in alarm
BRANDED INTERFACE
Just as with the Virtual Keypad™ app, you can upload your logo so your customers will be reminded of the service you provide every time they log in to VirtualKeypad.com.

ELEGANT USER INTERFACE
Just like the Virtual Keypad app, the browser provides users with a clean, elegant, easy-to-use interface. Controls are logically arranged with all functions just a click away.

RED ALARM STATUS
In System Overview, a red arming area will display if an alarm is active when you log in.

FAULTED ZONE
When a faulted zone is encountered during the arming process, the system will display an Alert Message listing the faulted zone(s) and options for Okay, Bypass or Stop. Okay will force arm all faulted zones. Zones that are force armed are restored into the system if it later returns to normal. Bypass will bypass all faulted zones. A zone that is bypassed remains bypassed until the system is disarmed. Stop will stop the system from arming.

SCHEDULES
Schedules allow users to add, edit or delete schedules. Schedules affect arming, outputs, doors and Favorites. When the tab is selected, all the schedules assigned to the current system are listed. Any updates at a keypad or by Remote Link™ will be synced automatically.

ZONE STATUS
This allows users to easily check one screen for the current status of all zones on a system. A yellow triangle indicates faulted zones.

DOOR ACCESS
Virtual Keypad gives users real-time access control with the XR Series panels. Users can lock or unlock multiple doors.

DOOR STATUS
Use this tab to quickly verify the current status of a system’s doors. This is a panel setting per door.

LOCKDOWN
Lockdown is available for XR150/XR550 panels by selecting Lockdown. All Public Doors and Z-Wave® Locks will lock on the system with a single click.

HOME AUTOMATION FEATURES
With Z-Wave added to the system, the user has the ability to control connected lights, thermostats, exterior door locks and other Z-Wave enabled devices. Their laptop becomes a wireless control center for their entire home or business.

The automation capabilities include Favorites features. Users can define a set of parameters for their security system and multiple Z-Wave modules, then give that set an easily remembered name for one-click control. They could create the “Good Night” favorite, for example, that would turn out or dim connected lights, lock doors, adjust the thermostat and arm the system, all with one click.

This integrates with popular home devices like Apple TV, Amazon Alexa and Google Home.

COMMERCIAL AND RESIDENTIAL APPLICATIONS
Business owners appreciate the ability to manage their security from a browser, whether they are in the office, at home or on the road. They can easily access multiple business locations by choosing the desired system from the drop-down list.

Residential users also appreciate the ability to control their system from a computer anywhere in their home, or from an Internet-connected computer while they are away from home.
VIDEO CAPABILITIES
The user can incorporate up to 16 cameras, interior and exterior, wired and wireless, into their system. Via VirtualKeypad.com, they can selectively monitor any of the cameras and record video. This improves security by enabling them to do a remote “walk-around,” either from across town or from their bedroom. User can opt to have all of the clips emailed to them.

SIMPLE USER OPERATION
Users log in with their email and password provided by the dealer. They can select the system they want to control from the drop-down list of available systems before entering their user code.

Forgotten passwords are easily retrieved by user request. A new, temporary password will be emailed to their account address so they can do a self-reset. Users can change passwords.

MANAGE USER CODES
You can configure accounts to include User Codes Management. This provides the system manager/owner with access to all authorized system users and the ability to add, delete and modify users and edit their codes.

For XT Series™ and XTL Series systems, the system manager can assign authority levels to each user (Master: Full authority or Arm Only authority). They can also assign users as Temporary, which are automatically deleted in seven days.

For XR150/XR550 Series panels, the system manager can assign up to four profiles, each with defined capabilities. Users are then assigned to one of these profiles. For Temporary users, the system manager can specify the date and time when the rights will expire. There are 99 profiles available to configure each user’s required access.

HISTORY
Users can review system activity from the History tab. Messages include:

- Alarm Events
- Arm/Disarm or Open/Close Events
- Troubles
- Sensor Activity

Quick Search saves time when looking for a specific event. Enter a phrase, and it narrows the system activity.

REPORTS
The Reports tab gives users the option to:

- Run reports
- Search results
- View scheduled and saved reports
- Automatically email reports on a schedule

EXPANDED VIDEO FEATURES
The DMP network video recorder (NVR) works hand-in-hand with Virtual Keypad Access to expand storage and manipulate multiple cameras. The NVR has ports for up to eight networked cameras and can store up to 2 terabytes of footage. You can access that entire footage from the NVR or directly from VirtualKeypad.com or the Virtual Keypad app. It’s fast and simple to view security footage in live view or download and export clips to other devices.

Supporting ONVIF™, Hikvision® and SecureCom Wireless™ video cameras, our PoE NVR can be installed virtually anywhere as long as it’s on the same LAN network as the IP cameras.

ANALOG VIDEO
Analog Video is also supported in the Virtual Keypad platform by using the 4-Channel Analog Converter which supports up to 16 channels of analog video.

ADMINISTRATION
Set up and manage user codes and schedules a single time for multiple panels. For facilities with multiple panels, this definitely saves time.
MANAGE CREDENTIALS
This allows you to choose either User Code or Access Card all in one record. For example, John Smith may have multiple credentials (a card, user code, fob and prox patch) all managed under his authority or profile. This credentialing hierarchy makes data entry faster and easier to manage. As a unique feature of Virtual Keypad, you can easily transfer data to multiple records.

MANAGE HOLIDAY DATES
Setting Holiday Dates provides the system with dates in the year when the normal opening and closing schedules are not used. Virtual Keypad lets you easily manage your holiday schedules, whenever you need to and wherever you are.

VIRTUAL KEYPAD ACCESS
Virtual Keypad Access expands your managed access control opportunities with additional services, generating recurring revenue. Optional modules let you create profitable customized offerings that include card/badge management, video system integration and others. Because Virtual Keypad Access is maintained via the Cloud, your customers can also have the flexibility to remotely manage their own systems, if they prefer. For more information, refer to the LT-1769 Virtual Keypad Access spec sheet.
