

Add network communication to any panel

Extend the life and expand the capabilities of older panels by adding the power of advanced network communication. With this simple communications add-on, almost every panel can take advantage of revenue-building remote system management and control features.

- Provide central station communication over network for any burglary, commercial fire or residential fire panel
- Use Contact ID capture, 4 slaves zones, or Bell Monitoring
- iComSL™ enables basic remote panel control via Virtual Keypad App™
- Provides end user alerts of arming/disarming, alarm, and other events
- Add Z-Wave control of lights, locks, and thermostats with iComSLZ™

iComSL SERIES NETWORK ALARM COMMUNICATOR

SYSTEM FEATURES

- Fully supervised network alarm communication
- Fully supervised network fire alarm communication
- Program your own account number to easily workaround locked panels
- Contact ID dialer capture
- Four zones or Bell Monitoring
- Wiring for Ademco ECP Bus
- Communicates with DMP SCS-1R and SCS-VR Receivers
- Builds customer loyalty; creates new RMR
- Armed/disarmed status LED
- Private labeling available on the rubber logo insert
- Two outputs

WORKS WITH MOST PANELS

If the existing panel supports Contact ID capture or 4 slave zones, then it's a candidate for upgrading with the iComSL or iComSLZ. There are no issues with lockout codes. Simply add the iComSL unit to the existing installation and program in your own account number.

AVAILABLE MODELS

The iComSL provides control of basic panel security functions and video. The iComSLZ adds the ability to remotely interact with Z-Wave devices, enabling a variety of home automation features including control of lights, door locks, thermostats and more.

FIRE COMMUNICATION

The iComSLF offers network fire communication on any fire control panel via Contact ID Captures or Zone Inputs. Meets NFPA 72 Standard for Single Communication Technology.

MOBILE SYSTEM CONTROL

With iComSL communicators you can easily update your older residential and commercial customers to the latest network communication links. With network in place, end users can remotely access their panels via the Virtual Keypad App™. This makes it possible to use their mobile device not only to control basic arm/disarm functions and receive alerts, but also to control Z-Wave home automation devices for lights, door locks, thermostats, garage door controllers, and more with the iComSLZ.

SPECIFICATIONS

Dimensions:	5.5" W x 3.75" H x 1" D
Color:	White or Red (Fire)
Open-Collector Outputs:	2
Zones:	4
Primary Power (iComSL/SLZ):	12VDC
Primary Power (iComSLF):	12-24VDC
Current Draw:	
12 VDC Alarm/Standby	59 mA
24 VDC Alarm/Standby	33 mA

ENABLE VIDEO ON THE APP

Video is no longer an expensive option. With the iComSL communicators, you can easily add up to six wireless cameras. Via the Virtual Keypad App, end users can do a remote visual survey of their premises to confirm an alarm or simply check in on children, senior adults, or pets. Users can also capture still or video images.

FULLY SUPERVISED COMMUNICATION

Provides a fully supervised alarm communication path for burglary control panels and fire control panels over the network connection providing higher speeds. iComSL allows alarm messages to be communicated to an SCS-1R or SCS-VR Receiver.

FIELD PANEL UPDATES

The Model 400 USB Flash Module allows you to easily field update firmware for panels that would otherwise require the use of a computer and a Model 399 Programming Harness.

iComSL	Network Alarm Communicator
iComSLF	Network Fire Alarm Communicator
iComSLZ	Network Alarm Communicator, Z-Wave

CERTIFICATIONS

For approval information, access www.dmp.com and select Compliance.

MULTIPLE CONNECTION OPTIONS

iComSL communicators can be attached to the existing panel in a variety of ways. It can capture Contact ID messages from the dialer, or connect the four input zones from outputs on the panel; or it can sense the output of the bell of an existing alarm and communicate the appropriate message to the Central Station.

FOUR ZONES

Both of the iComSL models provide four zones for connection to burglary control panel outputs. Zone 4 is intended for connection to the control panel bell output.

EASY UPGRADE FOR DIALER-ONLY PANELS

Older, dial-up panels have new life with the addition of network communication. Earn customer loyalty by extending the life of their existing panels, enabling them to increase the ROI on their system investment and build satisfaction with the purchase decision.

BUILD CUSTOMER LOYALTY

Avoid the possibility of customers seeking mobile intrusion alarm features from a competitor by enabling those features on their existing panel with a minimal additional cost. They are less likely to switch systems and cancel their contract. When the time does come to replace the panel, they are more likely to rely on you.

The app can be branded with your organization's logo and contact information to provide a daily reminder of your services.

OUTPUTS

Use outputs to connect to an arming zone of an existing panel for control of that panel via the App.
