PLAYING BACK RECORD FILES

INSTANT PLAYBACK

Play back the recorded video files of a specific channel in the live view mode. Channel switch is supported.

INSTANT PLAYBACK BY CHANNEL

Choose a channel in live view mode and click the play button in the quick setting toolbar. In instant playback mode, only files recorded during the last five minutes will be played back.

PLAYING BACK BY NORMAL SEARCH

PLAYBACK BY CHANNEL

Enter the **Playback Interface**.

Right-click a channel in live view mode and select **Playback** from the menu.

Note: Pressing numerical buttons will switch playback to the corresponding channels during the playback process.

PLAYBACK BY TIME

Play back video files recorded in specified time duration. Multi-channel simultaneous playback and channel switch are supported.

1. Enter **Playback Interface**.
2. Select **Normal/Smart** in the drop-down list.
3. Select the stream to **Main Stream** or **Sub Stream**.
4. Select a camera in the **Camera List**.
5. Select a date in the calendar and click the **play** button on the left toolbar to play the video.
6. Click the **Normal** radio button to start playing the continuous recorded files.

If there are recorded files for a camera on a specific day, the icon for that day is displayed in different colors for different recording types, **Blue** represents **Continuous Recording**, and **Red** represents **Event Recording**.

PLAYBACK INTERFACE

You can use the toolbar at the bottom of the Playback Interface screen to control playing progress.

Note: Use the mouse to click any point of the progress bar or drag the progress bar to locate specific frames.

BACKING UP RECORD FILES

QUICK EXPORT

1. Enter the **Video Export** interface. Choose the channel or channels you want to back up and click the **Quick Export** button.
2. Select the format of the recorded files to be exported. Up to 15 formats are selectable.
3. Click **Export**. Stay in the exporting interface until all files are exported. **Export Finished** will appear on the screen when all files have been exported.

BACKING UP BY NORMAL VIDEO/PICTURE SEARCH

Files can be backed up to various USB devices like flash drives, HDD's, USB writers, SATA (Serial Advanced Technology Attachment) writers, and e-SATA (External Serial Advanced Technology Attachment) HDD's.

BACKUP USING USB FLASH DRIVES AND HDD'S

1. Enter **Export Interface**.
2. Select the cameras to search.
3. Set search conditions and click the **Search** button to enter the **Search Result** interface. The matched video files or pictures are displayed in a chart or list.
4. Select video files or pictures to export.
5. Export the selected video files or pictures. Click **Export All** to export all selected videos or pictures at the same time.

If the USB device is not recognized, click the **Refresh** button and reconnect the device.

BACKING UP BY EVENT SEARCH

1. Enter **Export Interface**.
2. Select the cameras to search.
3. Select **Alarm Input, Motion, VCA, or POS**.
4. Click the **Search** button. The video files are displayed in a chart or a list.
5. Select the video files you need and click **Export**.

BACKING UP VIDEO CLIPS OR PICTURES

1. Enter **Playback** interface.
2. During playback, use the **scissor** buttons in the playback toolbar to start or stop clipping recorded files, or use the **camera** button to capture pictures.
3. Click the **Gear** button to enter the **File Management** interface.
4. Export the video clips or captured pictures.
