

## SecureCom Video™ Network Video Recorder (NVR)

*A Secure Video Solution Protecting You in an Unsecured World*

Our SecureCom Video™ NVR with EASYconnectVPN™ means you have the freedom to view live and recorded video from your home or business with the protection of a fully encrypted Virtual Private Network (VPN) connection initiated from the NVR to the SecureCom video platform. At no time, therefore, will any video feeds be open to the public Internet.

### Distinctive NVR Features

Storage for up to 2 terabytes of recorded video and support for up to eight SecureCom Video™ or ONVIF® compatible cameras are just a few features available with the SecureCom Video NVR.

EASYconnectVPN™ ensures that live video sent via the Internet remains private. NVRs not using this technology require you to open a port and map it to your cameras and NVRs, leaving you vulnerable to hackers who find those open ports and gain access to those mapped devices.

### Virtual Keypad Support

A powerful tool that's connected to your residential and commercial security systems, the SecureCom Video NVR allows you to check in on your premises at any time, using the Virtual Keypad app. You can view your video surveillance 24/7 locally from your computer monitors or Apple TV® app. Or use the Virtual Keypad app or VirtualKeypad.com to access live view and video playback. With Virtual Keypad, in fact, you can combine dozens of different cameras and up to two of these NVRs into your systems and manage them all with one app.

## NVR PACKAGES

DMP offers two different IP camera packages featuring SecureCom Video's high-definition Network Video Recorder (NVR) in combination with our best-selling SecureCom cameras, both delivering the versatility of indoor/outdoor performance. All SecureCom cameras learn in and configure automatically for a plug-and-play installation within a couple of minutes.

These combined packages include four of either the SecureCom Bullet or SecureCom Dome cameras bundled with the NVR to offer you savings and yet everything you need for secure 720p HD video monitoring.

## Verify Intrusions and Cancel False Alarms

It's fast and simple to view security footage in live view, allowing you to confirm what's happening with your monitoring center. In the event of an intrusion, you'll be alerted by your Virtual Keypad app to determine the situation. The app then gives you live access to your cameras and the ability to cancel the alarm or verify an attempted break in is taking place. In either case, you'll be able to immediately notify your monitoring center using DMP's False Alarm question. You can also easily download and export clips to other devices locally via a USB drive.

## Expandable Storage and Camera Options

To meet your video surveillance needs, the NVR delivers 2 terabytes (TB) of storage with capacity to expand up to 12 TB. The SecureCom Video NVR works hand-in-hand with Virtual Keypad Access to expand storage and manipulate multiple cameras. You can stack two of the NVRs for a maximum of 16 cameras on any Virtual Keypad account.

## Easy to Set Up and Simple to Use

When used with SecureCom cameras, our NVR automatically detects and configures each camera. In addition, compatibility with all ONVIF compliant cameras ensures that you'll be able to use the cameras of your choice. Regardless of the cameras you're using, the NVR's PoE technology saves time on installation and also eliminates the cost of providing external power supplies, making cameras plug and play.
